Tuesday, March 19th 2024

The Delegation of Nepal recognizes the need for access to quality education in the country and the world. The delegation acknowledges that the average US student in 30 assessed states from Grades 3 to 8 lost an estimated 53 percent of a grade level in math and 31 percent of a grade level in reading proficiency between 2019 and 2022. A clear sign to the effects of the COVID 19 pandemic and its effect on education. The Global Humanitarian Response Plan initiated by the United Nations set aside 6.7 billion dollars towards COVID 19 relief, a fund that, while The Democratic People's Republic of Korea was included in, Nepal was not.

The delegation would be very open to the idea of adding more technology focused curriculum to make learning more accessible, however due to the nature of the nation this simply isn't possible. Nepal still needs to catch up with the modern world. The nation cannot afford to ascribe to western curriculum standards without catering to actual needs of the country first. The nation's internal enrolment campaigns and midday meal programmes have enormously contributed to the increase of schooling of children in Nepal. As a result; the Net Enrolment Rate of basic education (grade 1-5) has significantly increased to 96.6 percent with 82 percent of completion rate.

Nepal needs to center curriculum around jobs that the nation needs to build infrastructure. Curriculum that, while still fosters room for deviation, breeds students ready to become essential workers. Engineers, electricians, construction workers, telecommunication line installers and water treatment plant operators will be necessary for building Nepal's infrastructure and economy. To minimize the human cost of this incentive, Nepal will increase the minimum wage and redirect money from excessive schooling and invest in these services, therefore building the economy and increasing wages. Campaigns generating excitement about these careers will also be put in the classrooms of public schools and on government buildings outside of private schools. Some long term goals will be to fix the Nepalese infrastructure and create employable jobs that boost the economy within the next 20 years. Short term wise, Nepal aims to make the school reliable and accessible to all kids by 2026. Public schools will provide buses and school will start later in the morning, at 9:30 to allow for the buses to reach all the necessary homes.

School will also end early at 2:15 to allow students ample time to get home, finish any homework and assist their caretakers in whatever way they may be needed. The delegation is open to collaborating with other countries but unwavering in their desire for anatomy. Nepal does not want any other delegations interfering with Nepalese politics, way of life or school curriculum. Nepal is aware of its position politically and geographically on the map. Because of this, it is subject to the whims of India and China if they ever close their borders. So while Nepal is more than happy to collaborate with other nations, the delegation strongly reinforces that being involved in any hostile matters regarding China or India is non-negatable.
